In this class, we will show how to create intelligent details using detail items and nested detail items. By doing this, we will be able to keynote these elements to maintain a consistent noting procedure. If keynoting is not your choice, we will also cover how to tag these elements so that you achieve consistent notation of the details on every project.
This session will **NOT** be getting into 3D modeling as a detail. We will discuss how to embellish 3D views with 2D detail items.

Ask questions along the way!

- If you like this session consider attending my session on:
  - Linked Details Among Multiple Models in Revit Lab - AS122878-L
    Wednesday 8:00
  - or
  - Linked Details Among Multiple Models in Revit - AS122874
    Wednesday 1:00
Survey

- Are you using Text
- Are you using Tags
  - Keynoting
  - Element Tag
- Are you using Detail lines and Filled Regions
- Mostly Detail Items but all Text
- Mostly Detail Items and Tags
- Importing and exploding CAD files
Topics

- Creating the detail
- Annotating the detail
- Placing on sheets
- Detail item families
- Embedding Details
- Adding Intelligence to Detail Items
Final Questions
