

## Autodesk University Roundtable Summary

Please read and delete this section before posting. Use this template to capture the main points and take-aways from your Round Table. After completing, upload it to the Speaker Resource Center (SRC) using the *Upload Additional Class Materials* task no later than **December 15, 2014**. The document will serve as a re-cap for session attendees and a learning resource for the greater AU community.

SESSION TITLE	Switching from AutoCAD to Revit
SESSION ID	AB 5848-R & ABR AB 7997-R
SPEAKER	Steven C. Shell
COMPANY	Steven C. Shell, Architect

### MAIN DISCUSSION POINTS

---

- xxx Per my Handout
- xxx
- xxx
- xxx

### KEY TAKE-AWAYS

---

- xxx Most people are still really struggling with this subject, especially Facility Managers and BIM Managers and Firm Principals.
- xxx It also showed me that this topic is "on-going" and not the slightest bit resolved nor is there any "ONE" way to do this. (Which I have felt for a very long time and that is why I like this class!

### SUGGESTED FOLLOW-UP

---

- xxx I have been asked by a representative of Autodesk to turn this Round Table into a Lecture so that many others can attend (since so many were turned away due to the limitations of a Round Table. My thoughts on this are pretty strong. I do not want to stand in front of many professionals with many varied backgrounds and situations and "lecture to them". It is not my opinion which matters. It is the participant's ideas which I want to explore and share. I am very good at directing the conversation in order to get the opinions and ideas out there to share and dig deeper if needed.
- xxx My Opinion: (Based on some discussions with a few really smart and experienced people who I trust and know me and my teaching style very, very well.)  
Maybe we could do a pre-conference Leadership Forum and invite business owners and managers. This would give me the material I need to then "share" in a public 'lecture' presentation w/ Autodesk staff's help.
